Unprotected admin functionality

Lab: Unprotected admin functionality

APPRENTICE

LAB

✓ Solved

This lab has an unprotected admin panel.

Solve the lab by deleting the user `carlos`.

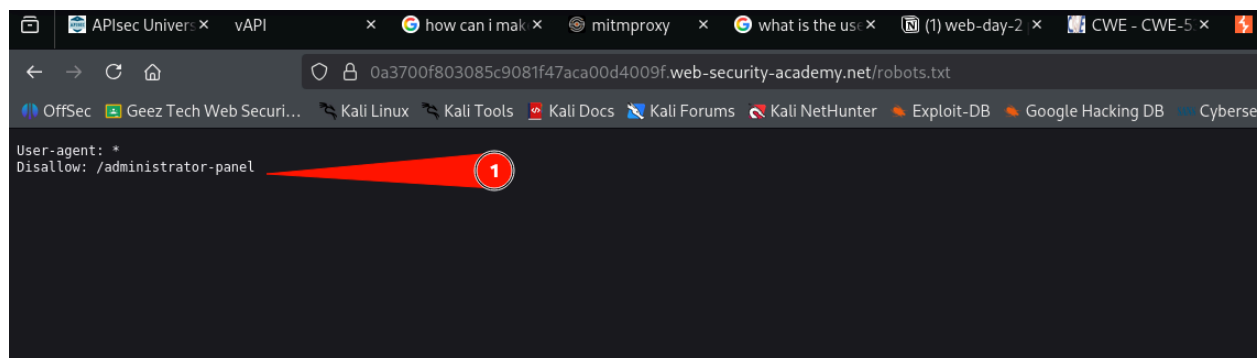

ACCESS THE LAB

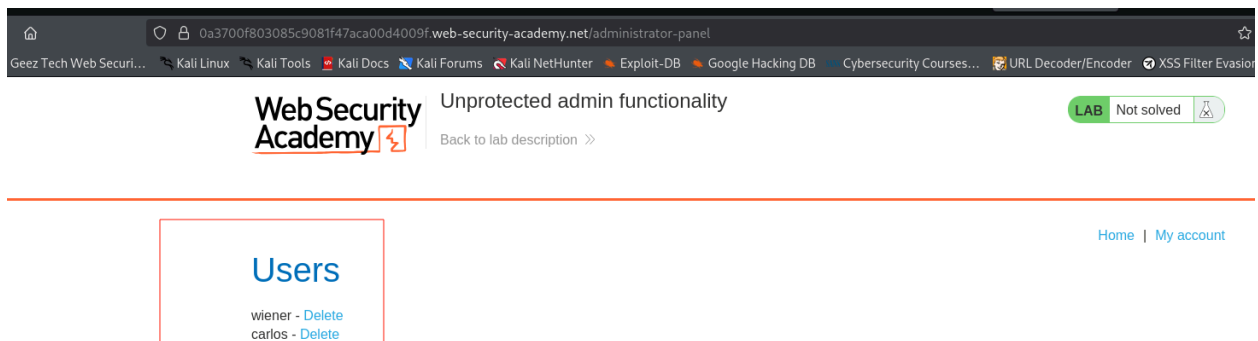

steps to solve the lab

1 , access the lab and there is no clue for the lab but try to enumunirate the directories which will allow as to access the admin panel

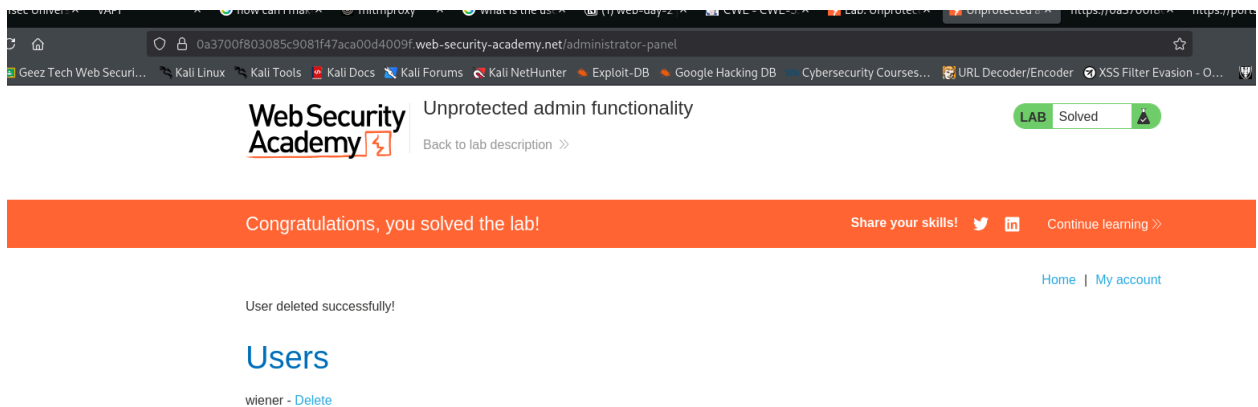

2 , web content enumeration with robots.txt file

here in robots.txt file we got the directory which is not protected to access as an admin and control the system .

3 the final step is to delete carlos

- The vulnerability discovered. is the unprotected admin panel
- The exposed information and its security impact. :
 - sensitive users in the admin panel
 - other user
- At least two recommended remediation measures.
 - authenticate before redirect to that admin panel
 - authorization before the regular user access to the admin panel
