

SQL injection vulnerability in WHERE clause allowing retrieval of hidden data

Lab: SQL injection vulnerability in WHERE clause allowing retrieval of hidden data

Lab: SQL injection vulnerability in WHERE clause allowing retrieval of hidden data

APPRENTICE

This lab contains a SQL injection vulnerability in the product category filter. When the user selects a category, the application carries out a SQL query like the following:

```
SELECT * FROM products WHERE category = 'Gifts' AI
```

To solve the lab, perform a SQL injection attack that causes the application to display one or more unreleased products.

ACCESS THE LAB

steps to solve the lab we should cause the application to display unreleased product

by injecting a malicious short code on the category parameter

category = ' OR 1=1 —
